ACME

Q2 2026 Performance Report

Quarterly Investment Review

Acme

30 June 2026

Executive Summary

This report covers performance for **Q2 2026**. Overall portfolio performance exceeded benchmarks by 2.4% on a risk-adjusted basis. Volatility remained within approved parameters throughout the quarter.

Key Findings

- Portfolio alpha: +2.4% vs benchmark
- Maximum drawdown: -1.8% (within -5% limit)
- Sharpe ratio improved from 0.82 to 1.04
- All risk limits respected throughout the period

Fixed Income

Duration Positioning

Duration positioning contributed positively as yields fell across the curve. Investment-grade credit spreads tightened by an average of **18 basis points**.

Credit Quality

The portfolio maintained an average credit quality of *AA-*. No defaults occurred in the investment universe during the quarter.

1. Investment grade: 72% of fixed income allocation
2. High yield: 18% — within 25% strategic limit
3. Cash and equivalents: 10%

Equity Exposure

Equity holdings outperformed the MSCI World index by **310 basis points** over the quarter, driven primarily by sector allocation within technology and healthcare.

Sector Breakdown

Overweight positions in defensive sectors provided downside protection during the mid-quarter volatility spike in late April.

Risk Management

Value-at-Risk at the 99% confidence level remained below the 2.5% limit for all portfolios under management. Stress testing against the 2020 pandemic scenario showed resilience across all mandates.
